Team Name: sdmay24-47
Team Members: Jack Sebahar, Isaiah Mundy, Helen Lau, Lal Siama, Mason Wichman, Nicholas Otto
Report Period: Oct 23-Nov 5

Summary of Progress in this Period

This week we continued training more basic AI models on Google Colab. We utilized the flower classification model provided by Google to walk through the process of training a model. We also developed a basic UI using TKinter for Python. The basic UI allows users to upload their data for processing via the Tensorflow-trained model.

Pending Issues

- Each member needs to sign NDA to receive training data
- Complete group member contribution form requested by Gaffar

Plans for Upcoming Reporting Period

- Continue developing basic models
- Refine UI
- Sign NDA and retrieve data
- Walk through and gain a better understanding of data
- Complete any class required assignments
